CHARGING INSTRUCTIONS

We specifie the following standard battery charge profile for the 27DC115 deep cycle battery when used in an electric vehicle service: Phase 1: Constant Current (I1) I1 = highest amperage available < 20 amps

Phase 1: Constant Current (I1)I1 = minimum amperage available > 10 amps

Normal transition to Phase 2 at 2.37 Volts Per Cell.

Safety transition to END OF CHARGE of dV / dt < 0V / 1 hr, dt = 1 hr. (NEGATIVE SLOPE).

Timeout for Phase 1 = 10 hours.

Phase 2: Constant Voltage (U2)U2 = 2.37 VPC

Normal Transition to Phase 3 at I2 = 4.0 amps or approximate. Safety transition to END OF CHARGE of I dI/dt I < 0.4 amp / 1 hr, dt = 1 hr.

Phase 3: Constant Current (I3) I3 = 4.0 amps or approximate. Normal transition to END OF CHARGE at 115 - 118% of AH returned.

Timeout for charging phases 1 - 3 at 16 hours. Temperature compensation coefficient = +/-3 mV / °C. Recommended Equalization Charge: Every seven (7) days. 4 additional hours at normal finish rate of 4.0 amps for 4 hours. Safety transition to END OF CHARGE at maximum voltage of 2.7 VPC.

APPLICATION RECOMMENDATIONS

Specific Gravity	Operating Temperature Range	Self Discharge	Terminal Torque Specifications
Fully charged battery specific gravity (100% state-of-charge) is 1.275 Fully discharged battery specific gravity (100% depth-of-discharge) is 1.125	-40°F to 120°F (-40°C to 49°C). Flooded lead acid battery capacities are temperature sensitive: refer to the temperature / capacity projection chart below to identify available capacity at the application operating temperature. Application Note: Maintain a state of charge greater than 60 percent when operating flooded lead acid batteries at temperatures below 32°F (0°C).	Fully charged batteries that are stored at a temperature of 80°F (27°C) will self-discharge at a rate of 3.5% per week.	SAE / Automotive Terminal Style: 50 to 70 in-Ibs / 6 to 8 Nm Stainless Threaded Terminal (Types C, S, Z): 100 to 120 in-Ibs / 11 to 14 Nm

Application Note: Lead acid batteries contain corrosive battery electrolyte and generate highly flammable hydrogen gas. When working near batteries wear protective clothing, gloves, and safety glasses when handling batteries and electrolyte and always work in a well-ventilated area. Do not over-torgue terminals. Over-torgue can result in terminal damage, breakage, terminal meltdown or fire. This flooded lead acid deep cycle batteries require periodic preventative maintenance and effective charging service to ensure dependable service life.

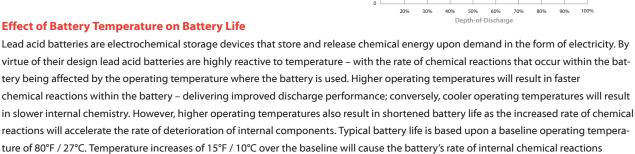

Battery Model	100% DOD Cycles		50% DOD Cycles	End-Cycle Voltage	40% DOD Cycles	End-Cycle Voltage	20% DOD Cycles	End-Cycle Voltage
27DC115	350	1.75 VPC	525	1.94 VPC	750	1.97 VPC	1500	2.05 VPC

The battery life references presented above are estimations based upon stationary life cycle testing conducted at our testing Center. The data references are nominal and should not be construed as maximum or minimum values for specifications or for final design. Data for this product type may vary from that shown herein, and the manufacturer makes no warranties - expressed or implied - based upon the data shown above

Effect of Battery Temperature on Battery Life
